

## **Neutering Male Cats**

Male cats can be neutered from 6 months of age. This can help to reduce urine spraying, wandering and fighting with other tom cats. There are no disadvantages associated with castration.

## **Neutering Female Cats**

Female cats can also be neutered from 6 months of age. This stops the cat from coming into season and the problems that arise from this, including calling and restlessness. Unwanted pregnancy is also prevented. There are no disadvantages associated with neutering.
